**A Systems Analysis of Medicine (SAM)
Healing Medicine**

Ken A. Bryson

This book is a must read for anyone interested in transforming the impersonal character of the medical experience into a personalized, relational, spiritual, and holistic dialogue about human health. It promotes a holistic vision of the doctor-patient relationship, a medicine that ought to be based on the totality of the human experience rather than on the reductive view of the patient as a person with a certain disease. Ken A. Bryson describes the character of medicine as the gateway to holistic healing and argues that we need to secure the ethical foundation of universal medicine as not relative to a cultural setting, thus establishing the Oath of Hippocrates as the universal gateway to human dignity. This view emboldens us to raise medicine from the level of an impersonal technological encounter with disease to its rightful place as a sacred activity that includes all the levels of the human experience. The book offers practical suggestions on how to accomplish that objective.

Atlas of Electroencephalography - Volume 3
EEG Neurology and Critical Care

Philippe Gelisse, Arielle Crespel, Pierre Genton

The third volume of the series of Atlases deals with the use and usefulness of electroencephalography (EEG) in neurology.

While EEG is universally recognized as a first-order investigation method in epilepsy (see Volume 2), and as an important contributor in sleep medicine, practical neurology has tended to neglect the value of this classical and established neurophysiological tool. A rich, extensively commented and analyzed collection of EEG plates is presented here.

The reader will be compelled to remember that EEG is the easiest way to assess parameters like state of vigilance, risk of seizure activity, type and degree of functional impairment, in a very clinical and practical setting. The authors cover many aspects of neurological practices where the EEG may help in diagnosis and treatment: metabolic and other encephalopathies, infectious and inflammatory conditions, vascular disorders.

It is particularly useful-and difficult- to distinguish between epileptic phenomena and EEG changes associated with metabolic abnormalities: a careful assessment of the EEG is of paramount practical importance here. Migraine is not always simple and there are many overlaps with other types of neurological diseases: the EEG may play a major part in helping the clinician in doubtful cases. Similarly, the diagnosis of dementia does certainly not rest on the EEG but many particular aspects concerning diagnostic overlaps or copathologies are aptly explored by the EEG.

Lastly, even the neurosurgeon may need the EEG to monitor trauma, tumor, bleeding...

SBAs, EMQs & SAQs in Surgery

Matthew Hanks

SBAs, EMQs & SAQs in SURGERY provides a broad range and style of questions, not only for medical students preparing for their final exams, but also for those clinicians preparing for their postgraduate exams.

This book includes over 200 single best answer questions (SBAs), 400 extended matching questions (EMQs) and 100 short answer questions (SAQs), giving the reader a wide variety of topics to test their exam knowledge and technique. It is an invaluable educational resource for exam preparation and to help you succeed.

Key features

- Over 700 questions on the core medical subjects.
- Compiled by a team of junior doctors with recent final exam and postgraduate specialty exam experience.
- Overseen by experienced doctors to ensure relevance and accuracy.
- The broad medical curriculum is covered in a succinct and consistent style.
- Clear and concise answers are provided.
- Easy accessible information to facilitate revision on the move.
- Enables the reader to assess their knowledge and help identify gaps in their knowledge to target revision.

The Medical & Surgical Residency Survival Guide How to Build a Tactical Advantage for Success

Daniel McMahon

Are you a medical student on the cusp of graduation from medical school who is soon to embark upon a journey through residency training? Are you an intern or junior resident muscling through the early years of your formative residency training? If so, this book was written exclusively for you.

The transition from medical school to residency training is a challenging and transformative experience that will come rushing toward you like a run-away freight train. Life as a resident physician is drastically different to what most experience during their clinical rotations in medical school. Medical school can sometimes feel like an extension of your undergraduate college experience; however, residency is an entirely different animal.

You will undoubtedly approach this transition into residency with a combination of raw emotion to include enthusiasm and eagerness but also trepidation and apprehension. This survival guide will serve to temper these emotions and transform them into a sense of confidence as you progress forward. This book is a focused, honest, and straightforward text that addresses the unique challenges encountered in residency training and more importantly discusses a number of strategies to facilitate tactful navigation of these challenging waters.
